

Aristocrat Ornamental Pear

Pyrus calleryana 'Aristocrat'

Height: 40 feet

Spread: 25 feet

Sunlight: ○

Hardiness Zone: 5a

Other Names: Callery Pear

Description:

A tall accent tree covered in attractive white flowers in spring followed by small inedible fruit, good fall color and a beautiful and symmetrical pyramidal shape, very ornamental and resistant to fireblight

Ornamental Features

Aristocrat Ornamental Pear is smothered in stunning clusters of white flowers with purple anthers along the branches in mid spring before the leaves. It has dark green deciduous foliage. The glossy heart-shaped leaves turn an outstanding orange in the fall. The fruits are showy yellow pomes displayed in late summer.

Landscape Attributes

Aristocrat Ornamental Pear is a dense deciduous tree with a strong central leader and a distinctive and refined pyramidal form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance tree that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy

This tree should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
